Adjustment Options

Based on the information you entered, there is a 62% chance of having a baby after your first egg retrieval and all embryo transfers (fresh or frozen) in the year following that retrieval. If you have a second egg retrieval procedure in that same year, there is a 81% combined chance you will have a baby. If you have a third retrieval procedure in that same year, there is a 89% combined chance you will have a baby.

Retrieval:

A procedure to remove eggs from a woman’s ovaries

Transfer:

A procedure in which an embryo is placed in a woman’s uterus to achieve pregnancy

You have entered the following patient and cycle characteristics:

- Age: **32 years**
- Weight: **150 lbs**
- Height: **5'8"**
- Number of IVF cycles used: **I've never used IVF**
- Number of prior pregnancies: **1**

- Number of prior births: **1**
- Egg source: **My own eggs**
- Diagnosis: **Endometriosis**
- Diagnosis: **Ovulatory disorder (including PCOS)**
